

Ink Proofing Device

Our initiative as a serving partner to you is to introduce new & Innovative concepts for designing & performing your process differently than the conventional one.

In today's competitive market every one is aiming at the savings because "savings is the direct earning".

We have emphasized this truth and positioned ourselves as a solution provider to the Industry with savings at maximum possible routine processes.

In this regard we have introduced some different concepts for ink industries "Printing & post printing process".

Ink Proofing Device is develop as most quality improvement features which can be used for color matching, preparation and precise sample of Gravure or Flexo inks and Coating materials.

An applicable device which can be print on film, foil and paper with most precise quality control parameters.

FEATURES :

- Setting through Micrometer
- Suitable for Different setting Parameter
- Complete Proofing Function with single attempt
- Inbuilt Inspection box
- Pneumetically operated
- Easy to clean

OPTIONAL :

- Flexo Head
- Coating Head
